

OPERATION

To operate, push the switch on the end of the Towel Shelf by the cord set. It will be illuminated when on and will be dull when off.

Your Warmrail Heated Towel Shelf costs less or similar to run to a regular light bulb. It will take approximately 45 minutes for the Heated Towel Shelf to reach its operating temperature, although this time will be shorter if towels are in place.

The Warmrails Heated Towel Shelf operates with a fixed power output, (typically 90° F above the ambient temperature). However, when operated with several layers of towels over the Heated Towel Shelf, the temperature will increase as much as 105° F above ambient. Once the towels are removed and where the rails are exposed, the temperature of the Heated Towel Shelf will quickly drop back. When operating correctly, the Heated Towel Shelf, although hot to the touch, is not hot enough to cause scorching (even a temperature of 115° F appears hot to the touch).

Please note: damp or wet material that has either been dyed, or is not colorfast, can cause discoloration in the finish if that material is draped over a Heated Towel Shelf while hot. Again, it is suggested that items are dried by using a completely protective layer of material such as a towel underneath.

Warning—this appliance is intended only for drying textiles washed in water. Fabrics that contain soap or detergent residue may show what appears to be scorch marks. However this is simply the discoloration of the residue. The Heated Towel Shelf does not reach sufficient temperature to scorch fabric.

Warmrails does not accept responsibility for any damage, discoloration or other damage to any item regardless of circumstance. To reduce the possibility of damage, do not place any items other than towels directly on the Heated Towel Shelf—always have a completely protective layer of towels between the Heated Towel Shelf and any other item.

CARE

The Heated Towel Shelf should be wiped down from time to time with a damp cloth.

Do not use any abrasive or corrosive cleaners.

INSTALLATION

This appliance must be used in accordance with any prevailing electrical code and relevant electrical wiring rules and regulations and in particular those regulations that cover use of appliances and accessories in damp situations such as bathrooms, showers, laundries and other areas with fixed water containers.

- Position the two flat wall plates approximately 22" apart (measured from the inside edge of each wall plate) at the height you would like the Heated Towel Shelf located.
- Partially tighten the top screw of each plate and check the wall plates are the correct distance apart, by slotting the Heated Towel Shelf gently onto the wall plates. Make adjustments if necessary and once the Shelf hooks firmly onto the wall plate, tighten all four screws all the way into the wall, so the plate is firmly against the wall.
- Where a stud is conveniently located, you can just use the screws to attach the wall plates. Otherwise use the wall anchors supplied to firmly anchor the screws into the dry wall.
- Hold the Heated Towel Shelf close to the wall just above the wall plates, and slowly lower it. You will feel the towel shelf 'hook' onto the wall plates and hold.
- Once securely attached to the wall, the Heated Towel Shelf can be plugged into an electrical outlet (we recommend using a GFI protected outlet). Push the on/off switch so that the light is illuminated and your Warmrail is ready for use.
- Remember, Warmrails are so energy efficient, you can leave them running continuously.

SAFETY INFORMATION

When using any electrical appliance, basic safety precautions should always be observed.

READ THESE INSTRUCTIONS CAREFULLY

- Do NOT use this appliance for other than its intended use.
- To avoid a hazard, the Heated Towel Shelf MUST NOT be used to hold towels or any other articles that have been in contact with oil, petroleum based products or dry cleaning fluids (unless completely protected by a layer of material such as a towel underneath).
- Use this appliance only on the voltage specified on the rating plate, or elsewhere in the instructions.
- Regulations require that only authorized persons carry out electrical work. For your own safety and that of others, ensure this is done.
- This appliance is not intended for use by young children or infirm persons without supervision.
- Young children should be supervised to ensure they do NOT play with this appliance.
- Do NOT store your Heated Towel Shelf while hot or still connected to the power supply.
- Do NOT immerse the Heated Towel Shelf in water or any other liquid.
- This product should NOT be used outdoors.
